This video shows some of the possibilities nanotechnologies might enable in future communication devices.

Nokia Morph is a joint nanotechnology concept, developed Sulla stessa lunghezza d'onda si esprimono sia il sito britannico live [Casino](#) . by [Nokia Research Center](#) (NRC) and the [University of Cambridge](#) (UK).

Morph can sense its environment and is energy harvesting. It demonstrates the ultimate functionality that nanotechnology might be capable of delivering: flexible materials, transparent electronics and self-cleaning surfaces.
