NANO presents the world of nanoscience through an interactive aesthetic experience. The exhibition is brought to you in collaboration by [LACMA Lab](#) and the [UCLA team of nanoscience](#), media arts, and humanities experts.

The exhibition not only merges the fields of science and culture, but also reinforces art and technology. "Nano" components were designed to provide visitors with an immersion of sensory modes and fluctuations in scale up to a billionth of a meter, which are characteristic of nanoscience. Visitors are encouraged to participate in artistic creations of their own through activities that provide them with a feeling similar to that of manipulating atoms.

Videos and pictures of the installations can be found on this website.
